

Cosmetic Product Analysis Dashboard

Final Project Report

Prepared for Project Submission

Date: 05 July 2026

Team ID: _____

1. INTRODUCTION

1.1 Project Overview

The Cosmetic Product Analysis Dashboard is a Tableau-based business intelligence project that helps users understand cosmetic product trends across brands, categories, price ranges and ratings. The project converts raw product data into visual insights through dashboards, filters, calculated fields and story views.

1.2 Purpose

- To analyze cosmetic product availability across brands and categories.
- To compare product pricing and rating patterns.
- To help customers, students and managers make data-driven decisions.
- To present insights through Tableau dashboard and story format.

2. IDEATION PHASE

2.1 Problem Statement

Customers and analysts often struggle to compare cosmetic products because product information is spread across many brands, categories, price points and reviews. This makes decision-making slow and confusing.

2.2 Empathy Map Canvas

User	Says	Thinks	Does	Feels
Beauty Buyer	I want a product that matches my need and budget.	There are too many options to compare manually.	Filters products by brand, price, rating and category.	Confused before analysis, confident after insights.
Store Manager	I need to know which brands/categories dominate.	Inventory decisions should be data-driven.	Reviews dashboard insights and product counts.	Responsible and cautious.

2.3 Brainstorming

- Build top brand analysis.
- Add category distribution.
- Add price and rating comparisons.
- Use filters for brand, category and price.
- Publish dashboard on Tableau Public.

3. REQUIREMENT ANALYSIS

3.1 Customer Journey Map

The user journey begins with awareness, moves into dashboard exploration, comparison and insight generation, and ends with sharing/exporting the dashboard for report submission or decision-making.

3.2 Solution Requirement

- Functional: data import, cleaning, calculated fields, visuals, filters, story and publishing.
- Non-functional: usability, security, reliability, performance, availability and scalability.

3.3 Data Flow Diagram

Data Flow Diagram - Cosmetic Product Analysis

3.4 Technology Stack

Component	Technology
Dashboard UI	Tableau Dashboard / Tableau Public
Data Source	CSV / Excel / Tableau Extract
Data Preparation	Tableau Data Source / Tableau Prep steps
Visualization	Tableau Worksheets, Dashboards and Stories
Sharing	Tableau Public and PDF Export

4. PROJECT DESIGN

4.1 Problem Solution Fit

The solution fits the problem because it reduces manual comparison effort and presents cosmetic insights in one interactive dashboard.

4.2 Proposed Solution

The proposed solution is an interactive Tableau dashboard that gives a summarized view of brand, category, pricing and rating patterns for cosmetic products.

4.3 Solution Architecture

Solution Architecture - Cosmetic Product Analysis Dashboard

5. PROJECT PLANNING & SCHEDULING

5.1 Project Planning

The project is divided into four sprints: data collection/loading, preparation/visualization, dashboard/story design, and testing/reporting. Total story points = 45 and average velocity = 11.25 story points per sprint.

6. FUNCTIONAL AND PERFORMANCE TESTING

6.1 Performance Testing

- Data rendered successfully in Tableau.
- Filters update connected charts.
- Calculated fields produce expected KPI values.
- Dashboard contains 6 visuals and 3 story points.
- Workbook can be exported/published after creating an extract.

7. RESULTS

7.1 Output Screenshots

Dashboard output preview. Replace with actual Tableau screenshots if required.

8. ADVANTAGES & DISADVANTAGES

Advantages	Disadvantages / Limitations
Easy visual comparison of brands/categories.	If the dataset has no sales data, revenue/profit analysis cannot be shown.
Interactive filters improve analysis.	Dashboard accuracy depends on data quality.
Tableau Public allows easy sharing.	Public dashboards should not contain private data.
Reusable for future cosmetic datasets.	Manual refresh may be required without automation.

9. CONCLUSION

The Cosmetic Product Analysis Dashboard successfully converts raw cosmetic product data into meaningful insights using Tableau. It supports quick comparison, clearer decision-making and professional reporting.

10. FUTURE SCOPE

- Add actual sales and profit data.
- Add customer review sentiment analysis.
- Add product recommendation model.
- Automate data refresh from APIs.
- Create mobile-friendly dashboard layout.
